CREDIT CARD

Revenue & Customer Analysis

Reconciling 10,293 customer records across MySQL and Power BI to find where revenue concentrates — and where the business is exposed

Bhawna Kumari | Data Analyst Portfolio Project

01

The Business Problem

A credit card issuer needs to know exactly where its revenue comes from — by card, by customer, and by geography — before it can grow or defend it.

1. Which card tiers and channels drive revenue?
2. Which customer segments and states concentrate it?
3. Where is the business over-exposed to a few segments?

Approach

From raw transaction data to a reconciled, trustworthy dashboard

1

MySQL

Modeled 10,293 customer records across two linked tables and wrote 12 analytical queries covering revenue, segments, and growth trends.

2

Power BI + DAX

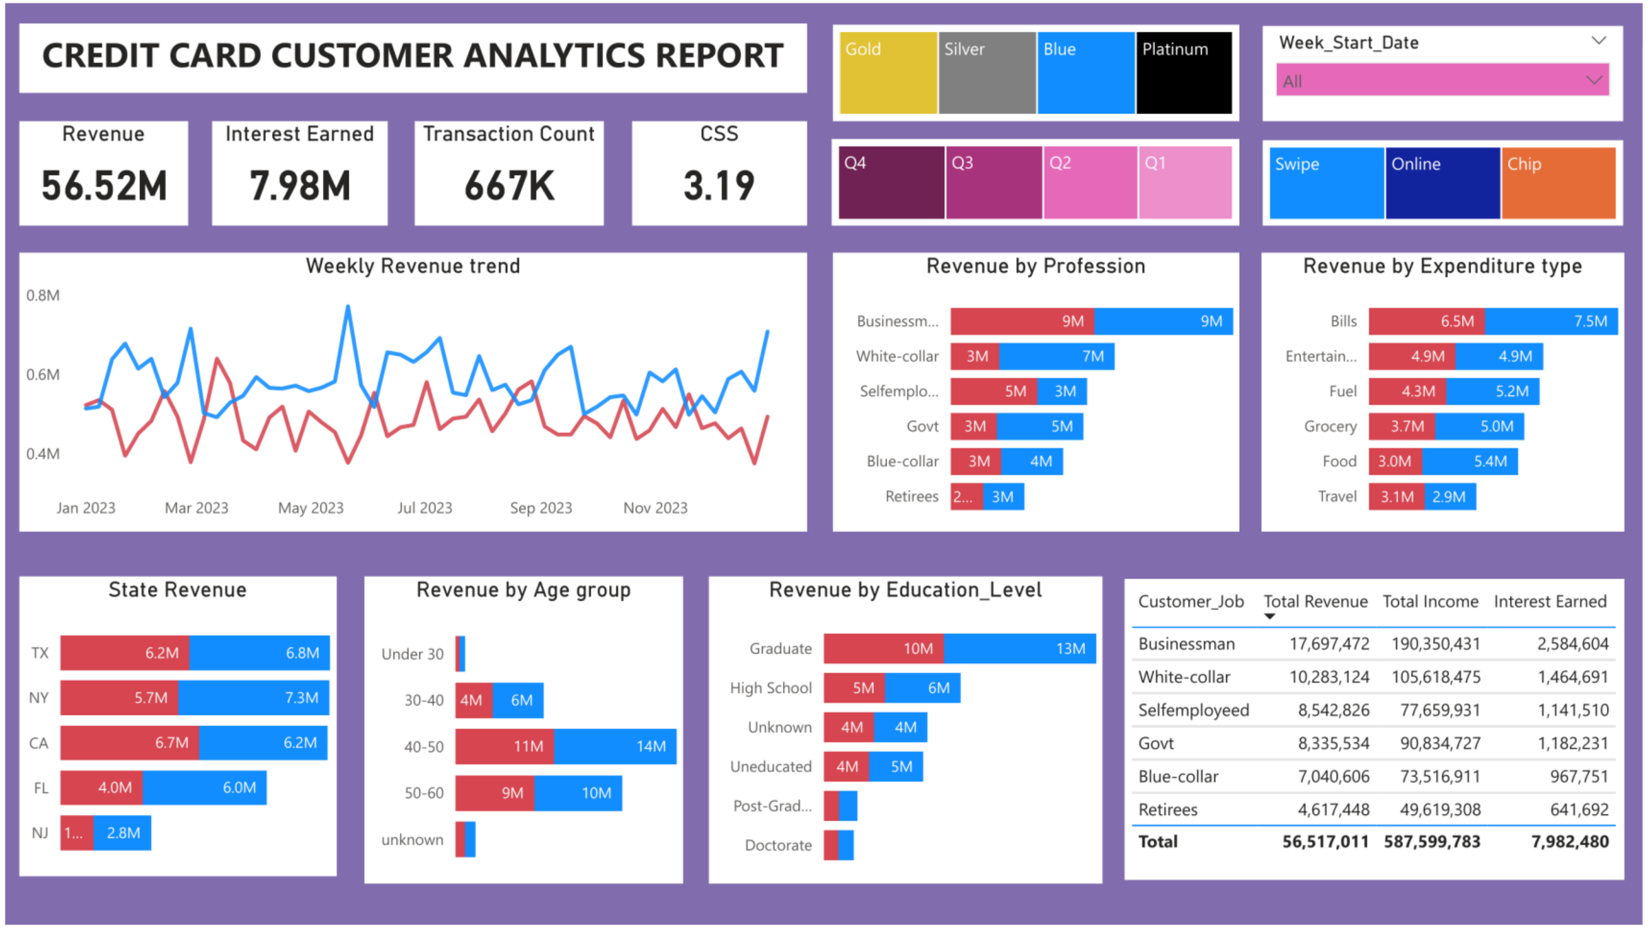
Built an interactive dashboard with Power Query transformations and DAX measures combining transaction, interest, and fee revenue.

3

Data Reconciliation

Caught a revenue mismatch between SQL and Power BI, traced it to an incomplete formula and 185 unsynced rows, and resolved both.

The Dashboard



What it does

- Filterable by card category, quarter, and channel
- 12 visuals: revenue trend, profession, expenditure, education, and state breakdowns
- Built with Power Query transformations and DAX measures
- KPI cards and charts update instantly with each filter

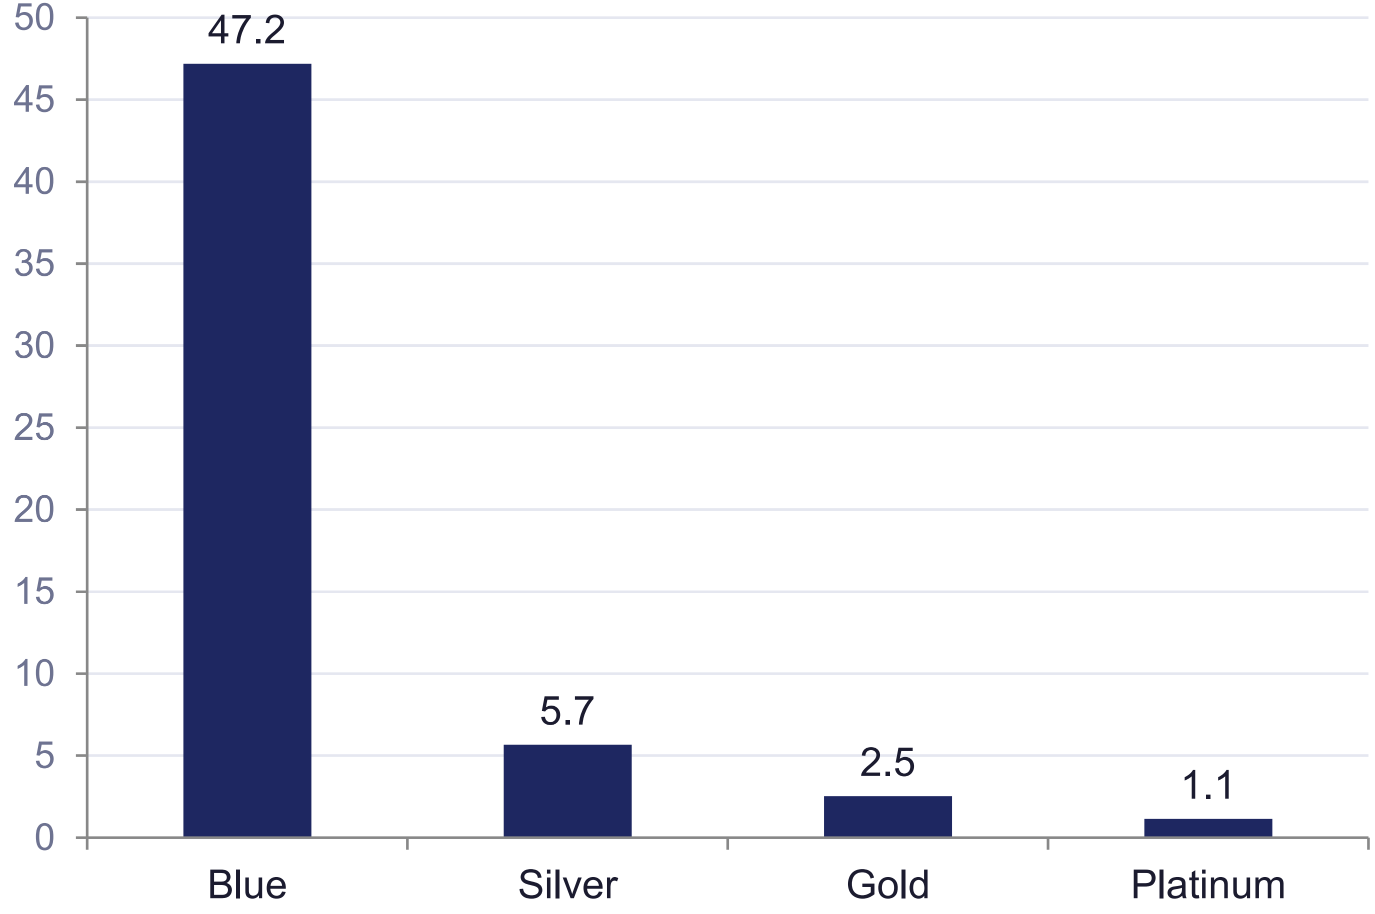
At a Glance

$56.52M	Total revenue
10,293	Customers analyzed
667,234	Total transactions
$7.98M	Interest income

Revenue = Transaction Amount + Interest Earned + Annual Fees • Customer Satisfaction 3.19 / 5

Blue Cards Carry 83% of All Revenue

Revenue by card category ($ millions)

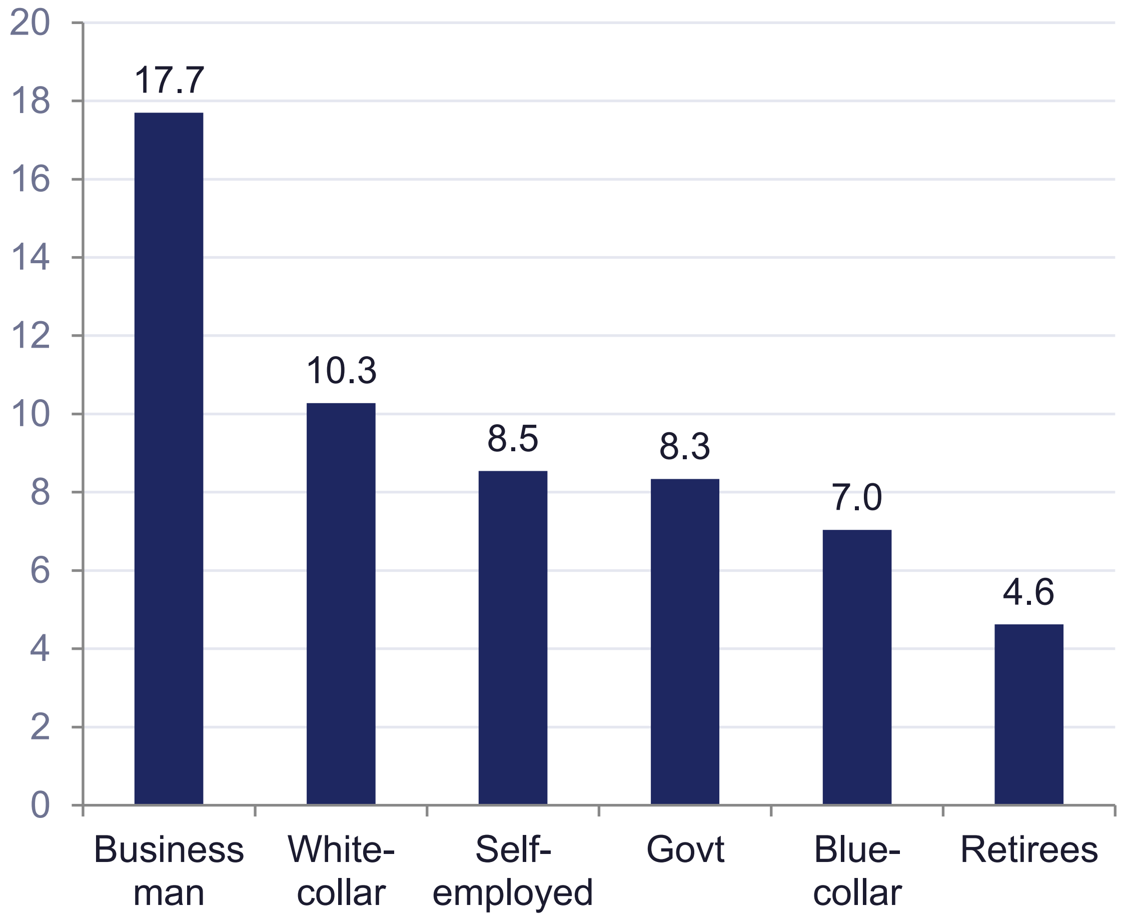


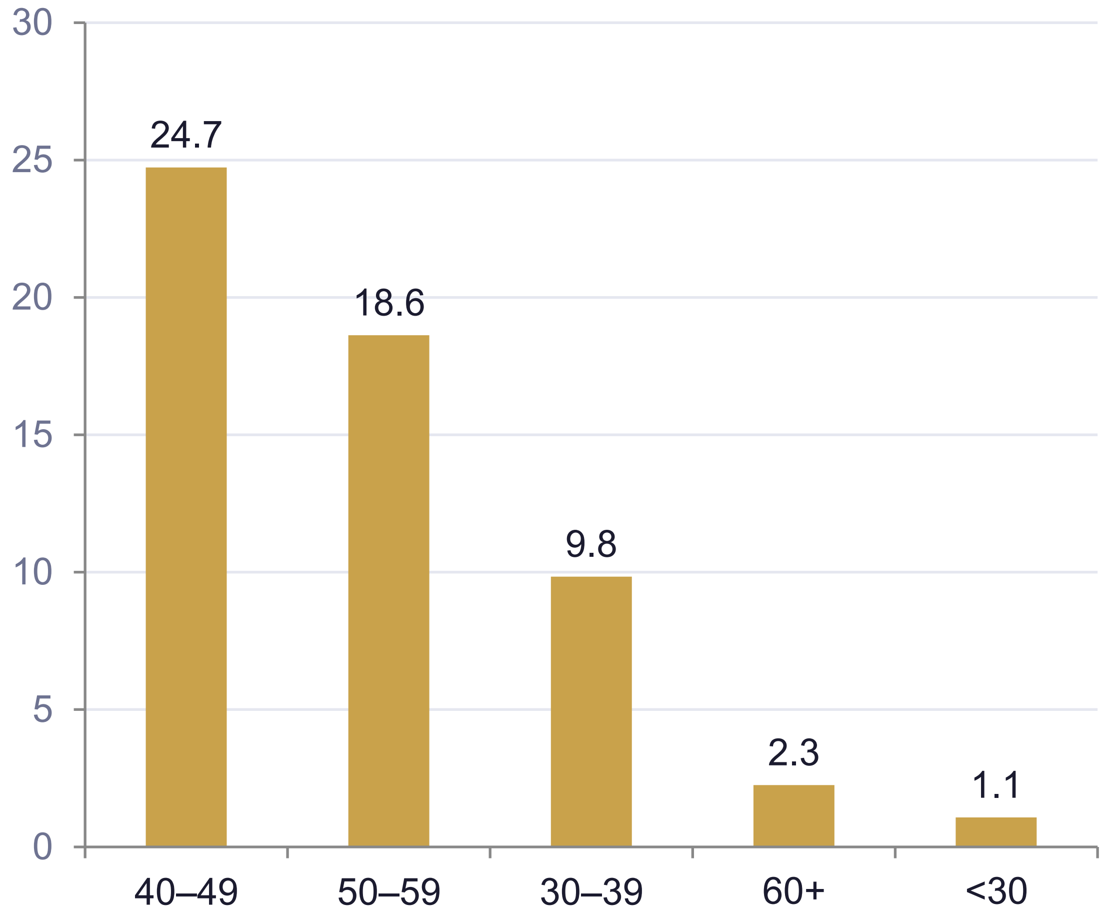
Why it matters

Blue-tier cards generate $47.19M — 83% of total revenue — not because they're premium, but because they're the most widely held. Silver, Gold, and Platinum together contribute under 17%, pointing to a large pool of Blue customers who haven't been upgraded.

Businessmen and the 40–59 Age Band Drive Two-Thirds of Revenue

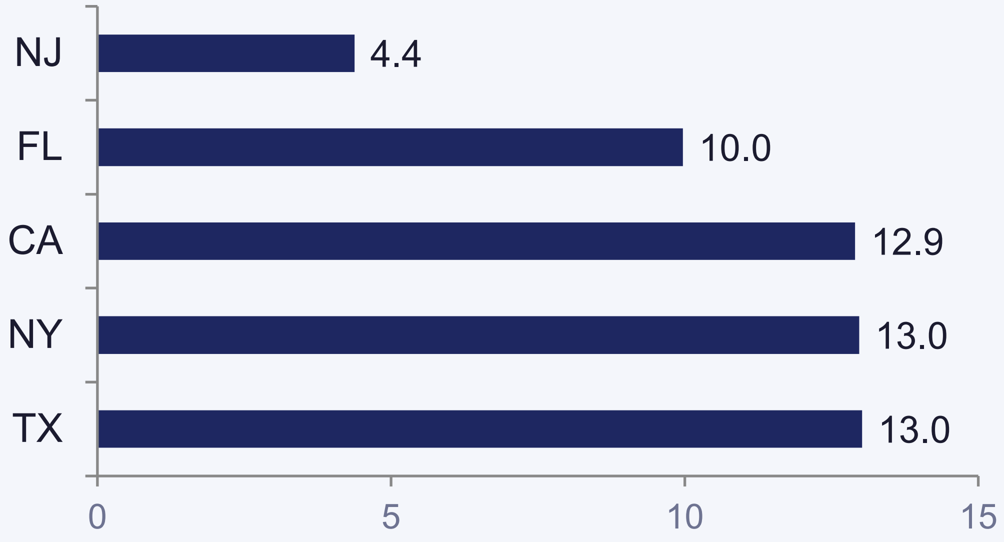
Revenue by profession and age group ($ millions)





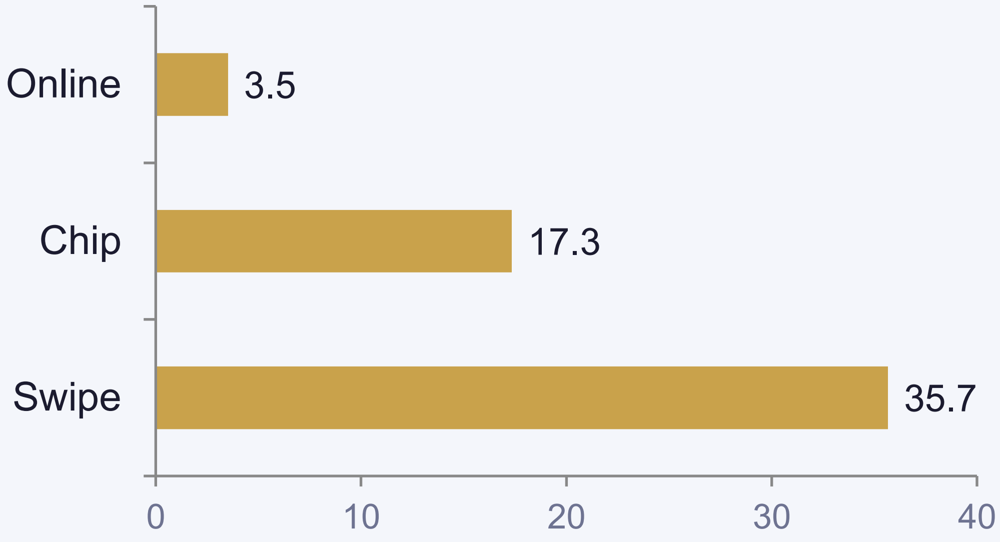
Revenue Is Concentrated — in 5 States and 2 Channels

Top States by Revenue



These 5 states alone account for ~94% of total revenue — the rest of the country contributes barely 6%.

Revenue by Channel



Online transactions generate just 6% of revenue — far behind Swipe (63%) and Chip (31%), despite being the lowest-friction channel to grow.

Business Recommendations

1

Upgrade the Blue base

With 83% of revenue concentrated in Blue, a targeted Silver/Gold upgrade campaign for high-spending Blue customers is the single largest growth lever available.

2

Diversify beyond 5 states

TX, NY, CA, FL, and NJ generate ~94% of revenue. Expansion marketing in underrepresented states reduces geographic concentration risk.

3

Grow the Online channel and lift satisfaction

Online contributes just 6% of revenue despite being the cheapest channel to scale, and a 3.19/5 satisfaction score alongside strong revenue signals room to improve retention before it erodes growth.

Tools & Skills

1

MySQL

Joins, CTEs, window functions (RANK, ROW_NUMBER, LAG) across 10K+ rows

2

Power BI

Interactive dashboard design, drill-through, KPI cards

3

DAX

Custom measures combining transaction, interest, and fee revenue

4

Data QA

Traced a $11M cross-tool discrepancy to its root cause and resolved it
